

Fig. S5

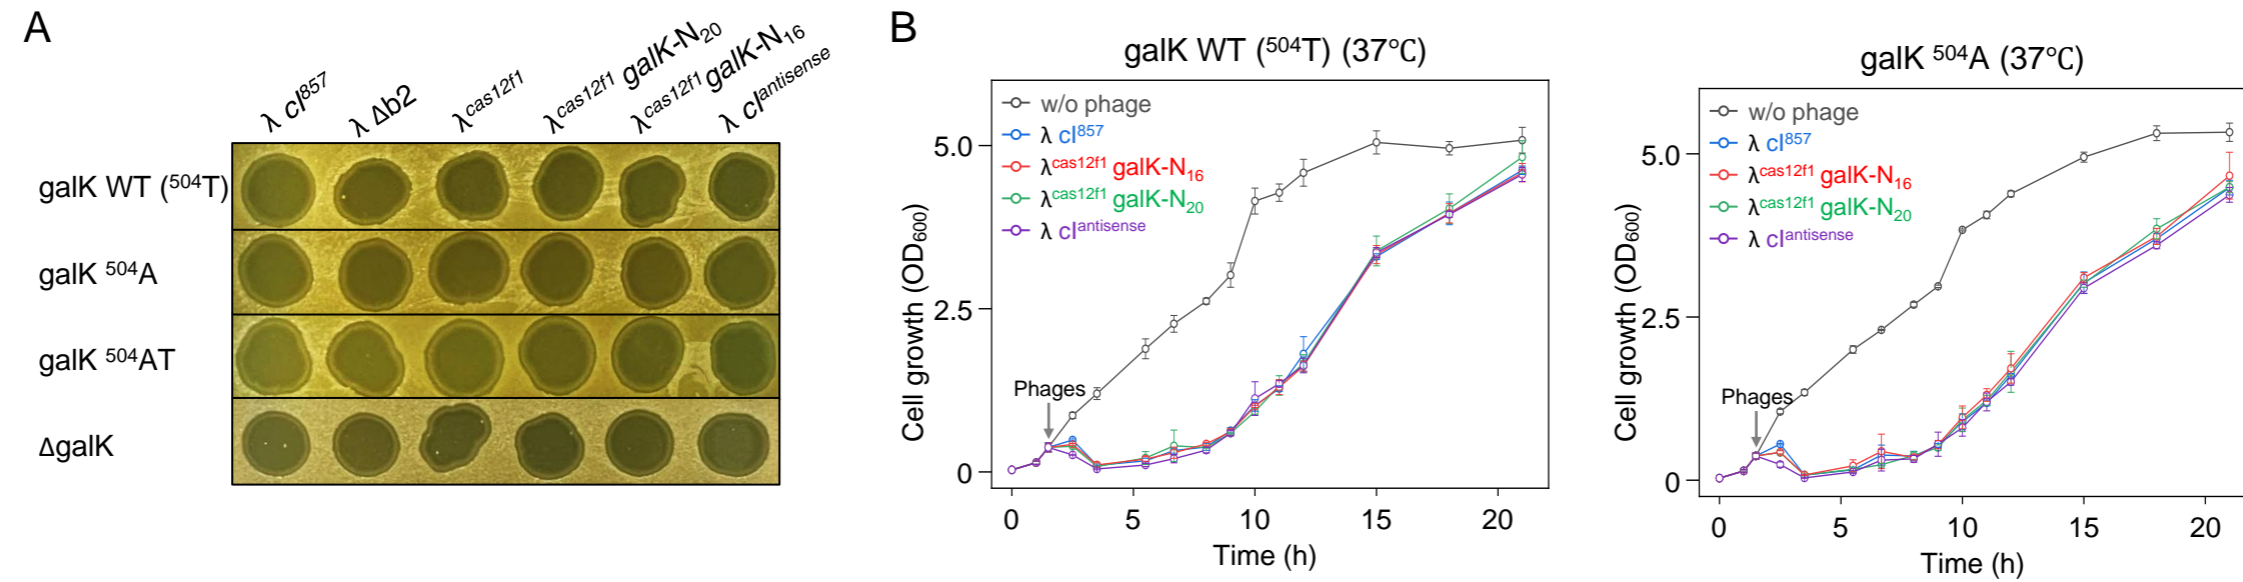

Fig. S5. Growth of *E. coli galk* mutant cells infected with various λ phages, including $\lambda^{cas12f1} galk-N_{20}$ and $\lambda^{cas12f1} galk-N_{16}$, at 37°C.

(A) Spotting assays of various λ phages on soft agar with *E. coli galk* mutants at 37°C.

(B) Growth curves of *galk* WT and *galk*⁵⁰⁴A cells infected with various phages, including $\lambda^{cas12f1} galk-N_{20}$ and $\lambda^{cas12f1} galk-N_{16}$. The gray arrows indicate the time points of phage infection.
