

Fig. S1. Protein expression analysis in the *RFA1-AID* strain during meiosis. (A) Expression of Rad51, Dmc1, and Pgk1 proteins in the *RFA1-AID* strain during meiotic recombination. CuSO_4 (20 μM) was added at 2 h to induce OsTIR1 expression, and IAA (2 mM) was added at 2.5 h to induce Rfa1 degradation. Protein extracts were analyzed by Western blotting with antibodies against Rad51, Dmc1, and Pgk1. Asterisks indicate non-specific bands. (B) Unprocessed Western blot images corresponding to Fig. 1D. (C) Unprocessed Western blot images corresponding to Fig. S1A.
