

Fig. S1. Representative MN-CPE and PRNT assay images using cynomolgus macaque sera collected before and after immunization. Representative plate images of MN-CPE and PRNT assays performed using sera collected at day 0 (pre-immunization) and day 56 (post-immunization) from cynomolgus macaques ($n = 3$). Neutralizing activity against HAdV-4 and HAdV-55 is shown for comparison. PC, positive control; NC, negative control.
